

INNOVATIVE SOLUTIONS TURRET GAS BAGS

GDLS and Tulmar collaborated over a number of months to validate the performance of the gas bags, including cycle testing to ensure integrity of the gas bag design. The gas bags have been installed successfully on the Kuwait National Guard Turrets.

Tulmar worked collaboratively with GDLS Canada and GDLS Woodbridge to develop gas bags for deployment on the Kuwait National Guard Turret upgrade program.

GAS BAG DESIGN

- Sealing out the external environment while still allowing for full movement of the guns,
- Providing a physical barrier allowing the turret system to maintain an overpressure state, thereby preventing entry of external agents into the turret space.
