
PRODUCT INFORMATION BULLETIN

BULLETIN #: PB-2006-02
ISSUE DATE: November 8, 2006
SUBJECT: **PRODUCT UPGRADE FOR HAMMERHEAD LIFE PRESERVERS**

The latest revisions of the Hammerhead Tactical Life Preserver, 67000 Rev A and 6760 Rev G, incorporate a number of design changes to aid functionality and performance.

The product improvements consist of the following:

- The number of worry beads on the manual inflation pull-handles has been increased from 7 to 10 beads to more easily accommodate two-finger gloves.
- A bead has been added to the loop-pull on the retro-reflective patch covers to facilitate grasping with gloved hands.
- A Velcro patch has been added to the retro-reflective patch cover to serve as an attachment position for personal locator lights.

Those customers who have purchased 6760 to an earlier revision have the option to upgrade their Hammerheads to Rev G. The product upgrade can be done in conjunction with the annual maintenance inspection.
